STARFLEET INSTALL GUIDE

Starfleet turns Claude Code into a starship console: a crew member for each project, a captain's log that saves to your own private page, and a warp core that shows how full your chat is. Here's how to add it in the Claude desktop app.

About 3 minutes Claude desktop app Free, open source

1 OPEN CUSTOMIZE

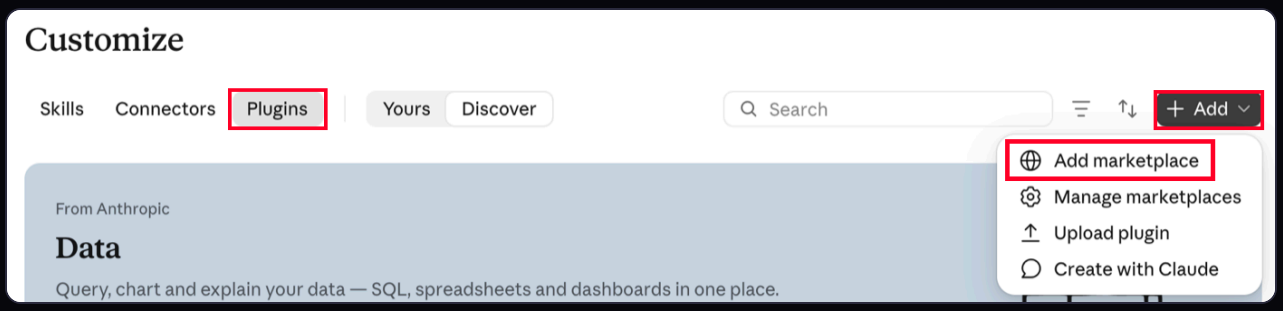

In the Claude app's left sidebar, click **Customize**. It's right under New, Artifacts and Routines.

You'll know it worked when a Customize page opens with Skills, Connectors and Plugins across the top.

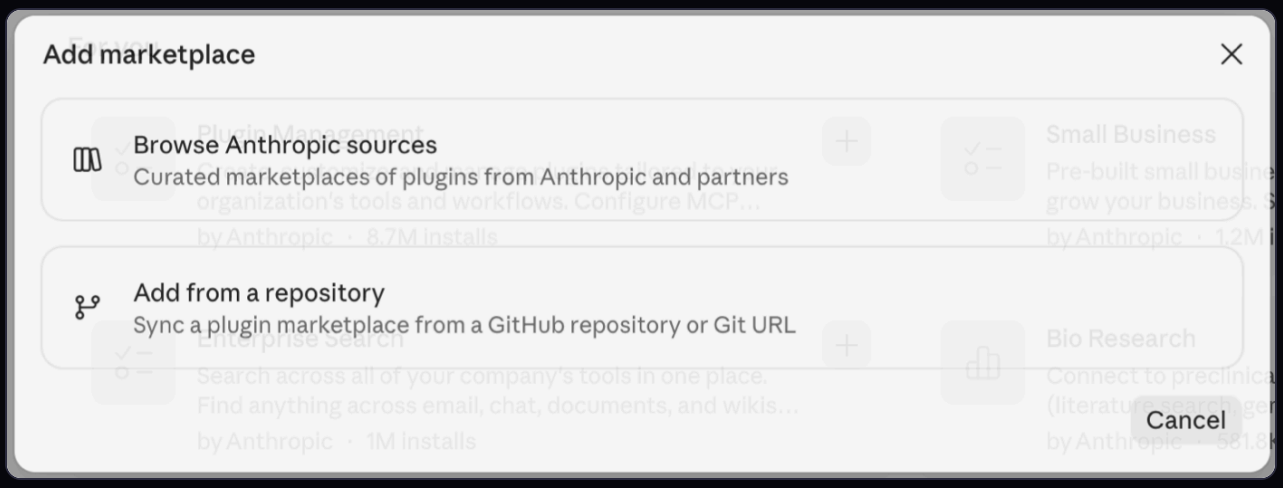

2 PLUGINS, THEN ADD MARKETPLACE

Click the **Plugins** tab. Then press **+ Add** at the top right and choose **Add marketplace**. All three are boxed in red below.

3 ADD FROM A REPOSITORY

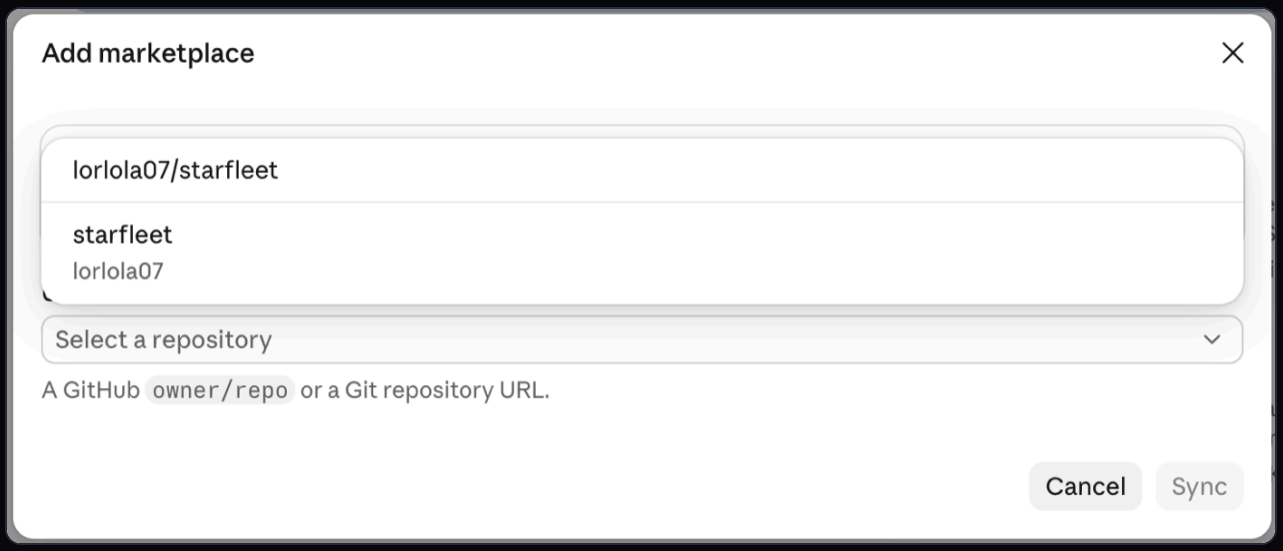

In the box that opens, choose **Add from a repository**.

4 TYPE THE STARFLEET ADDRESS

Click the **URL** field and type this. Pick **starfleet** from the list when it shows up, then press **Sync**.

```
lorlola07/starfleet
```

> **Heads up:** the box warns you to only add marketplaces you trust. That's a normal check for any marketplace outside Anthropic's own. Pressing **Sync** adds Starfleet for you.

5

OPEN CLAUDE CODE, THEN TYPE /STARFLEET

Open Claude Code and type `/starfleet`.

RED ALERT: DON'T SKIP THIS ONE.

To get the most out of Starfleet, set up your hub. It's where your captain's log notes, crew and missions are saved, so without it your notes have nowhere to go.

6 SET UP YOUR HUB

Under **Captain's log** in the console, press **Set up my hub**. Claude makes your own private Starfleet Command page on claude.ai, where your notes, crew and missions are saved.

> **You'll know it worked** when Claude replies with a link to your new page and the button goes away. Notes you log from then on land there on their own.

ONE KNOWN BUG. WANT TO HELP SOLVE IT?

After you press a button in the console, scrolling can shiver in place. Press **Esc** and it stops right away.

We haven't cracked this one yet. If you like a good puzzle, the Known issues section of the README has what we've tried so far, and you can share an idea or a fix on GitHub.

USING THE TERMINAL INSTEAD?

Run this at a Claude Code prompt, say yes to adding the marketplace, then pick a scope:

```
/plugin install starfleet --marketplace lorlola07/starfleet
```
